*Installs like Sand, Sets like Cement*TM

DRiBOND® was created to bond (1" or 30mm) thin pavers over existing concrete surfaces without removing existing concrete, which is a costly and time-consuming process. Ironically, if you remove the concrete, you're removing the best possible base for your future pavers...!

DRiBOND® is the first polymer modified bonding agent specifically developed for residential concrete driveways. It installs like sand and sets like cement in a fraction of the time it would take to install traditional pavers.

Customers now have the ability to transform their old, stained and cracked concrete driveway into a hardscape masterpiece within one to two days.

Over one million square feet of thin pavers have been installed over the past seven years utilizing the DRiBOND® technology.

Updated technical data sheet and MSDS can be found on our website at www.DRiBONDsolutions.com.
